Rockefeller Center, New York City

The vigorous plants produce an abundance of large, super-double flowers, $3\frac{1}{4}$ inches across, and with as many as **40 to 50 true petals**; single Nasturtiums have only 5, and the Double Hybrids, 8 to 10. When fully opened, the flowers resemble greenhouse-grown Carnations.

The extreme doubleness and unusually large size of the flowers constitute two of the most important characteristics of this new type. Stems are distinctly thicker and the plants sturdier and more vigorous than any other Nasturtiums.

Burpee's Super-Double Nasturtiums keep on blooming and never go to seed.

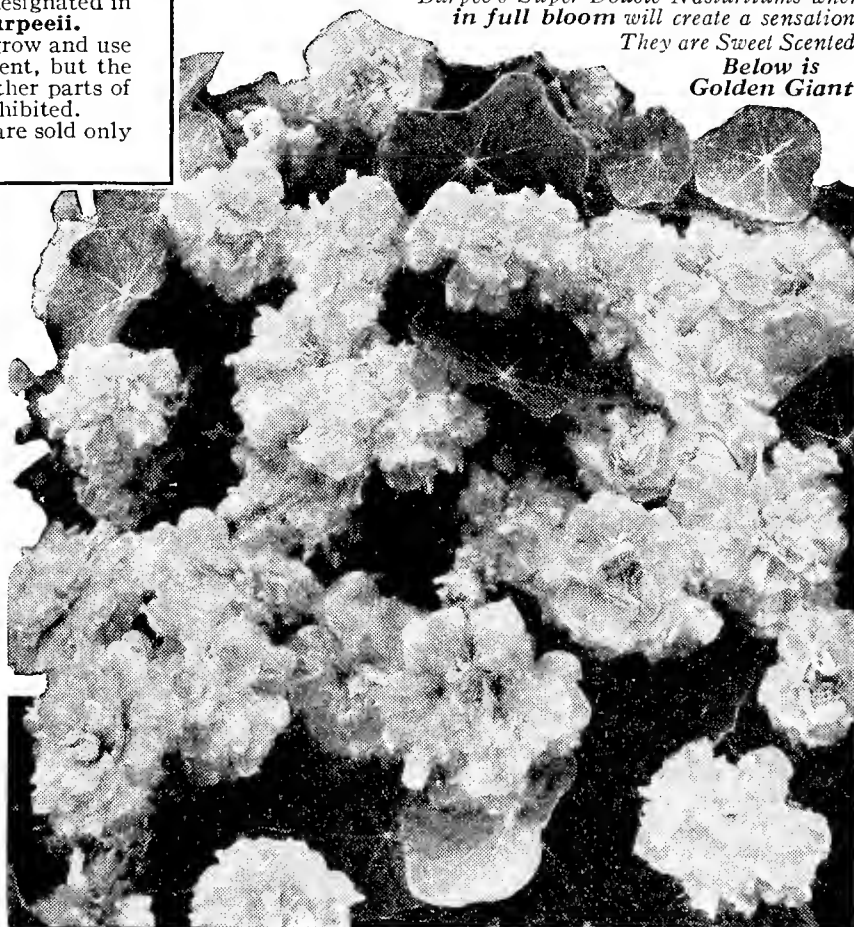

We offer strong, pot-grown plants which have been grown from cuttings. They are in two colors, **Scarlet Giant** and **Golden Giant**.

Plants will grow semi-tall or trailing and may be cut back where a dwarf effect is desired.

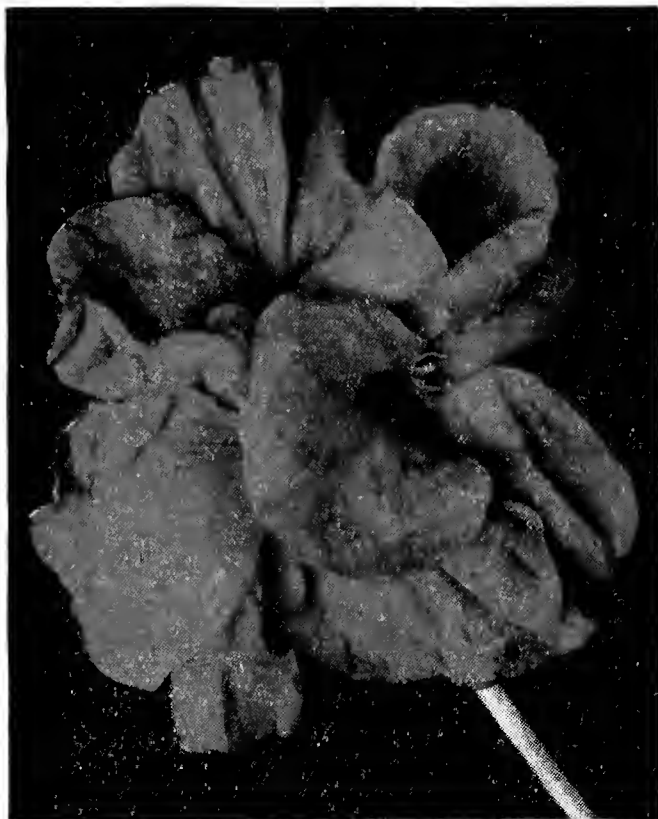

Gardeners everywhere will want these startling, sensational new flowers. Order early, and please state about when you desire the plants shipped.

For the Best and Latest in Double Nasturtiums, you can depend on Burpee.

Semi-Dwarf or Golden Gleam Type

Four New Colors This Year

All four are Burpee originations, having been developed on our Floradale Farms in California. Two years ago we originated and introduced Burpee's Double Hybrids; we were the only seedsmen in the world who could supply mixed colors of Double Nasturtiums to their customers.

Last year we offered Burpee's Double Scarlet and another distinct type—the dwarf or Globe, in golden yellow as well as mixed colors. Here again we were the only seedsmen who had these novelties for their friends.

This year we have the scarlet flowered in the Globe type (see page 7), four new colors and a pastel mixture in the semi-dwarf class (on this page); Burpee's Miracle Mixed and plants of Burpee's Super-Double, the only Nasturtium ever to receive a U. S. Plant Patent (see page 6).

The large double and semi-double flowers, 3 in. across, are exquisitely sweet-scented and borne on long stiff stems well above the foliage of the semi-dwarf plants.

Giant Ruffled Petunias

(*Petunia hybrida grandiflora superbissima*)

Petunias are among the most satisfactory annuals for garden display. They succeed in ordinary, well-drained garden loam such as will grow a good crop of vegetables, and in a location where they receive plenty of sunlight.

Some types are especially suited for bedding and pot culture, others are ideal for edgings and mass plantings, while others are unexcelled for porch and window boxes; all are excellent for cutting. The freedom with which the charming blooms are produced throughout the growing season is truly amazing.

Burpee's Giant Ruffled Petunias are unsurpassed for bedding, cutting, and pot culture. The flowers, with their large, wide-open throats are deeply ruffled, artistically veined and, when well grown, often measure 5 to 7 in. across. They are marvelous in every respect. Burpee's Snapdragons

*Majestic
Snapdragon
Red Chief*

Snapdragons (botanically Antirrhinums)—have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding in ordinary well-drained garden soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable. Sow seed outdoors when soil has become quite warm; for earlier blooms sow indoors six weeks before your regular outdoor planting time. Full cultural directions on every packet. Best treated as annuals, although they are biennials in sections where mild weather prevails in winter.

Majestic Giant-Flowered Semi-Tall Snapdragons

New and distinct. The massive, hyacinth-like spikes are closely set with flowers as large as those of the Tall Giant (Maximum) type, offered on page 16. The plants, however, are of semi-tall growth. 18 to 24 in. tall. Ideal for beds, borders, cutting and pot culture.

1565 Purple King Attractive new variety with very large blooms of a clear, rich shade of Cattleya-purple. An unusual color of great beauty. Pkt. 25¢; 1/16 oz. 70¢; 1/8 oz. \$1.25.

Maximum or Tall Giant Snapdragons

(*Antirrhinum*
Maximum)

If rust has destroyed your *Antirrhinum* plants in the past, plant our Rust-Proof varieties this year.

Surpass all others for stateliness and magnificence of flower-spikes, which, when grown outdoors, attain a height of 2 to 3 ft., while in the greenhouse they grow considerably taller, depending on culture. If grown in good, well-prepared soil and protected from high winds, the plants will form beautiful bushes surmounted by marvelous tall spikes, the upper 10 to 12 in. of which are studded with perfectly gorgeous blooms of huge size and exquisite form. Whether planted in solid beds, or in clumps in the border, the effect will surpass your fondest expectations. As cut flowers, these Giants are invaluable.

New Rust-Proof Giant Snapdragons

Rust-Proof Snapdragons have always been wanted by florists and home gardeners. With the creation of these new strains, which produce plants 75% or more, immune to rust, a great advancement in breeding for disease resistance has been made, and it is only a matter of a short time before strains will be offered that will be 100% immune. With rust possibility eliminated, Snapdragons will become more popular than ever, just as wilt-resistant strains have made Asters so popular.

Burpee's Famous Asters

A continuous display of Asters from early summer until frost can be had by planting early, midseason, and late varieties. The Asters offered here will come into bloom in about the following order: **EARLY**—Dawn, Queen of the Market, Royal, Imbricated Pompon; **MIDSEASON**—King, Astermum, Crego, California Giant, Giant Branching, California Sunshine, Single Giants; **LATE**—American Beauty and Mammoth Peony-Flowered. Asters are easy to grow. They prefer rich, well-drained soil, plenty of sunshine and ample moisture. Asters bloom from three to five months after seed is sown, varying according to variety and climate. For early blooms sow seed indoors in boxes or pans six weeks before outdoor planting time.

All varieties marked **W.R.** (Wilt-Resistant) are highly immune to **Fusarium Wilt**.

Very large, fully double flowers, 4 to 5 in. across, with long, ribbon-like petals gracefully curled and twisted, giving them a lovely fluffy appearance. The plants are strong growing, of branching habit, and about 2 ft. tall. Long stemmed; fine for cutting. Midseason.

Astermums

The extra-large, double flowers are composed of innumerable long, fairly broad petals which are curled and interlaced much the same as those of the giant Chrysanthemums of the florists. The plants, which branch freely, average 2 ft. in height, and come into bloom a little before the Improved Crego Asters. Being long-stemmed and large-flowered—the individual blooms often measure 4 in. or more across—Astermums are particularly valuable for cut flowers.

The name Astermum is a contraction of Aster and Chrysanthemum, the latter of which they resemble in many ways.

Royal Asters or Early-Flowering Branching

An early, large-blooming type of Aster with elegant, well-rounded, double flowers on very long stems. The broad petals are medium long, gracefully curving inward, except for the centermost petals, which usually form an attractive whorl. The plants branch near the ground, which insures long flower stems for cutting. Royal Asters come into bloom when the "Queen of the Market" are at their best. 2 to 2½ ft.

Giant Branching Asters *American, Semple's, or Vick's Branching*

From midseason until frost these Asters will produce a profusion of beautiful flowers. The blooms are very large, $3\frac{1}{2}$ to 4 in. across, and fully double, with the petals somewhat incurved and massed so closely as to form a very attractive, globular flower. The plants grow 2 to 3 ft. tall and branch freely, producing stems frequently 2 ft. long, which makes this class especially fine for cutting. Nothing could be more dazzling than a blaze of color such as these giant flowers will give. Plant them liberally this year.

Burpee's Annual Larkspur

One of the most beautiful and desirable Annuals for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large double blooms on long, attractive spikes. Even the deep green, very finely divided foliage is beautiful.

Their culture is simple. They do best in a sunny position, in rich, well-drained garden soil, free from fresh manure. As they like cool weather in which to germinate and grow best, seed should be sown as soon as the frost is out of the ground. Do not sow in cold, wet ground, however. We suggest sowing seed where plants are to bloom as they sometimes resent being transplanted. When seedlings are large enough to handle, thin tall varieties to stand 2 ft. apart, the dwarf varieties, 1 ft. apart.

Giant Imperial—Upright Delphinium Form

Attractive flower-spikes, 3 to 4 ft. tall, which stand upright, close to the center stalk—a decided improvement on older types. Well-formed, large, double flowers.

A glimpse of Burpee's Sweet Peas on our Floradale Farms in California, where we grow hundreds of acres every year for seed production. When in full bloom, our fields are a sight that every visitor will long remember. Floradale Farms are familiarly known as "The California Home of Flowers."

Burpee's EARLY FLOWERING Sweet Peas

Burpee's Early Flowering Sweet Peas come into bloom 3 to 4 weeks earlier than the Summer Flowering varieties offered on pages 40 to 45. They are especially adapted for growing in frost-free sections, and for earliest blooms outdoors in the North and also valuable for winter flowering under glass. They are being planted more and more every year. If you live in a locality where the late Sweet Peas have not done well for you, try some Early Flowering. They will bloom before the summer heat arrives. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. They prefer an open, sunny location, and deep rich soil which must be well drained.

Burpee's Sweet Peas are famous the world over as the "Best That Grow." The flowers are extra large, of perfect form and texture, well placed on long strong stems and usually produced in sprays of four. To simplify selecting varieties, we have marked with a star (*) those that we consider best in their color group.

Burpee's Famous Zinnias

The value of Zinnias as garden and cut flowers cannot be stressed too highly. Their long blooming season, which extends from early summer until fall, together with their wide range of color and varied flower forms, makes them most popular. Zinnias are heavy feeders, and while they will grow in poor soil and under unfavorable conditions, they must have rich or well-fertilized soil and water freely during periods of dry weather if the finest flowers are wanted. Do not plant in shade or near trees. Zinnias are hot weather flowers, coming into their full beauty in late summer. Plant in full sun. After the soil has become thoroughly warm, sow seed in the open ground where plants are to bloom. Thin out large-flowered varieties to stand 2 ft. apart, smaller flowered types, 1 ft. Will bloom in about 2 months during warm weather.

Zinnia, Lilliput Salmon-Rose

Lilliput Baby or Pompon Zinnias

The small, pompon-like flowers of Lilliput Zinnias are exquisite and most appealing. Plants are dwarf, bushy and very branching; 12 to 18 in. tall, and literally covered with double blooms, 1 to 1½ in. across. Whether used for borders or beds, or as cut flowers for indoor decoration, Lilliput Zinnias are bound to make a gorgeous display.

Delphinium—Hardy Larkspur

Delphiniums are among the most beautiful and most widely used perennials for garden display and cutting. The regal stateliness of their massive, colorful spikes is unequalled by any other flower. They are of easy culture, succeeding best in deep, rich, well-drained soil. The soil may be thoroughly mixed with well-decayed manure but the roots must not come in contact with it. A half-shaded situation where light and air can freely circulate about the plants, but protected from high winds, is ideal. Bloom in June and if spikes are cut close to the ground after blooming, new flowering growths will be produced—usually three crops in one season! Blooms the first year if sown early.

Burpee's Delphiniums are the best that can be had anywhere at any price. They have been perfected through many years of careful breeding work, and are unsurpassed for size of the blooms and exquisite coloring.

Majestic Hardy Lilies

Lilies, from time immemorial, have been looked upon as the noblest of garden plants. The majestic habit of the plants, the exquisite form of the flowers, and the striking colors will always make them favorites. Easy to grow in good, well-drained but slightly moist garden loam and, once established, will increase in beauty each year. Most all Lilies delight in a sunny location, but mulch so the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfier ones also give a charming touch of beauty to the rock garden. As cut flowers, Lilies will keep for many days. Lily bulbs differ greatly in size, some 1 inch across, others 3 or more; we supply the sizes which will give the best results.

Brussels Sprouts

are more delicate in flavor than Cabbage. They are quite hardy and will live throughout the winter in our sections without any protection whatever. The flavor and quality of the sprouts are greatly improved by frost. Sow the seed thinly in drills early in June and transplant to rows 3 to 4 ft. apart in the garden or field. When the sprouts begin to form, remove the lower leaves to force all nourishment sent to the lower stem into the sprouts. One oz. of seed sows 500 ft. of row. Requires 125 days to mature.

162 Burpee's Danish Prize A strong-growing, robust variety of large, solid, round sprouts set thickly on nearly the entire length of the tall stems. Sprouts all mature at about the same time. Pkt. 10¢; oz. 20¢; 4 ozs. 65¢; ½ lb. \$1.00; lb. \$1.75.

Green Bush Beans

Beans are one of the most satisfactory and productive vegetables because they grow so vigorously and bear with such wonderful abundance. Plants of the Bush Beans range from 15 to 20 in. tall. Seed cannot be sown until the weather is quite warm. In the vicinity of Philadelphia, early May is about the right time for the first sowing of Bush Beans. A warm, well-drained, sandy loam is best suited. The beans are most delicious if they are picked before they have reached full size, and the plants will continue bearing much longer. The early varieties mature in from 45 to 65 days. To provide for a continuous supply, seed should be sown every 10 to 14 days up to August 10th. Plant in rows not less than 18 in. apart, cover with 2 in. of soil, and firm the surface to assist germination. One pound of seed sown thinly fills a row 250 ft. long; usually 90 lbs. of seed are sown per acre.

Shell Beans

For use as Dried Beans during the winter

Extensively grown everywhere for use as dried beans. The small-seeded varieties, like Robust Pea Bean, are sown at the rate of 30 to 45 lbs. per acre. Shell Beans should be left on the vines until they are thoroughly matured and dried out before they are put away for winter use.

Follow the Bull's Eye

We have used this mark  for years to guide the gardener in the selection of varieties which we believe will give the best results under varied conditions of soil and climate.

This mark , usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the best of their class. If you are not thoroughly posted which varieties to choose as the most suitable for your particular section, we recommend that you make your selection primarily from those marked with the bull's eye.

Fordhook Farms*

**Early Maturing—Strong Upright Bushes—
Dark Green Foliage—Pods Grow in Clusters—
Four or Five Beans to Pod—Heavy Yielder
—Quality the Finest—Delicious Flavor**

A Burpee introduction that vies with Burpee's Improved Bush Lima for first place in quality and popularity. Burpee's Fordhook Bush Lima is in a class by itself, and is altogether unique. Nothing like it has ever been grown. It is a bush type of the popular "Potato" Lima; strong and erect and never prostrate or running. The stalks that produce the blossoms are thrown out from the lateral and main stalks, and the pods are borne in "clusters" of from 4 to 8 each. The individual pods are 4 to 5½ in. long, 1¼ in. wide, and as much as ¾ in. thick. Each pod holds 4 or 5 large, plump beans. The flavor of Fordhook is delicious, not unlike chestnuts. The plants grow 20 to 30 in. tall and make a spread of almost 2 ft. The foliage is of heavy texture and very dark green in color. Burpee's Fordhook Bush Lima Bean is known and grown wherever Beans are planted. On our own Seed Farms we grow enormous quantities of this Bean which we ship to our customers in every state in the Union. Plant Burpee's Seeds for best results. Lima Beans are a tender vegetable and the seed must not be planted until the nights have become quite warm. The middle of May is usually safe in the vicinity of Philadelphia. Bush Limas are good yielders, maturing in from 65 to 90 days, according to the variety. Plant in a warm, well-drained, sandy loam. Plant the seeds edgewise, eye down, 5 in. apart in the row, and cover 2 in. deep with fine soil. Later thin to stand 15 to 18 in. apart in the rows. One pound will sow 150 ft. of row. Keep the soil well cultivated, and pick the pods as soon as the beans have reached edible size.

Genuine Baby Fordhook

**New and Distinct. Entirely Different from any other
Bean. Fine for Home, Market or Canner**

The Baby Fordhook. Just what we have been waiting for. To give an idea of the size of the Beans themselves—the Fordhooks listed above are so large that 22 seeds will weigh one ounce. The McCrea is so small that it takes 70 seeds to weigh one ounce. While the seed itself is small, the plant is nearly as large as the original Fordhook. Plants are stocky, erect, dark green, of medium season, and a heavy yielder of pods which are rather thick, slightly curved and contain from 3 to 5 seeds. Green Shell Beans of true Potato type. Although the pods are small, the unusually delicious flavor of this Baby Lima has already made it a popular favorite with the market growers as well as the home gardeners. Burpee's Bush Lima Beans

63 Burpee's Improved Bush Lima

The pods are truly enormous in size, borne abundantly, and well filled with handsome beans which are both larger and thicker than those of the popular Burpee's Bush Lima—and fully 8 days earlier

ANOTHER WORLD FAMOUS BURPEE INTRODUCTION

Burpee's Improved Bush Lima is the best known and most generally grown of any Bush Lima Bean ever introduced, and has been steadily increasing its lead each year since 1907, when Burpee introduced and first offered it to the gardeners throughout the world. It is a wonderful improvement over the original Burpee Bush Lima—larger pods, bigger beans, greater yield, and fully 8 days earlier. The pods are enormous, borne profusely in clusters of from 5 to 8, and crowded with four or five appetizing Beans. Burpee's Improved Bush Lima is the largest podded and most prolific of the Bush Limas. The pods are 5 to 6 in. long; $1\frac{1}{4}$ in. wide. Even when fully matured the beans are of luscious flavor. The plants make a uniform, vigorous, upright growth, with heavy foliage. The blossom-bearing stalks are thrown well out from the foliage; the pods are frequently borne in clusters of 4 or 5 held well above the foliage. We counted two "clusters" of which one had nine and the other ten large perfect pods containing from four to eight Beans to the pod. In the same trials the green beans of Burpee's Improved averaged $\frac{1}{8}$ in. longer, $\frac{3}{16}$ in. wider, and $\frac{1}{8}$ in. thicker than adjoining fields of the regular Burpee's Bush Lima. Full-grown bushes measure 30 in. in height and 24 in. across the top. Matures in 85 to 90 days after sowing. Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.35; 10 lbs. \$2.50, postpaid.

60 Burpee's Bush Lima

This is the original dwarf, large-seeded Bush Lima as first introduced exclusively by Burpee in 1890. It is an immense yielder. The pods and beans, however, are not so large, nor are the bushes so prolific, as those of the Burpee Improved Bush Lima. The bushes, 18 to 24 in. tall, are of stout, erect growth, yet branching so vigorously that each plant develops into a rounded plant about 2 ft. in diameter. Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 35¢; 2 lbs. 65¢; 5 lbs. \$1.30; 10 lbs. \$2.40, postpaid.

66 Burpee's Philadelphia Bush Lima

This excellent Burpee variety is of special value because it matures extremely early. The plants are of upright habit and produce pods with the greatest abundance. The earlier pods are set quite close to the ground. Clusters of 6 to 8 pods are not unusual. The individual pods are $4\frac{1}{2}$ in. long and $1\frac{1}{8}$ in. wide, each containing four fair-sized beans of splendid quality. Pkt. 15¢; $\frac{1}{2}$ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$1.55; 10 lbs. \$2.90, postpaid.

The green shell beans are of delicious, sweet flavor. Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 35¢; 2 lbs. 60¢; 5 lbs. \$1.25; 10 lbs. \$2.25, postpaid.

Burpee's Pole Lima Beans

Pole Lima Beans greatly outyield the bush varieties per square foot of garden; but they require poles or other supports, and mature considerably later. One pound of large-seeded varieties for 75 poles.

Burpee's Best*

New Pole Lima Bean 105 Burpee's Best

See illustration in color on back cover

A vigorous and rapid grower, producing a continuous setting of pods until frost. First pickings are ready almost as early as Fordhook Bush Limas

A sensational new pole lima that combines the distinctive qualities of Fordhook Bush Lima with an enormous yield surpassing the heavy production of other Pole Limas. The lustrous green glossy pods contain four or five and sometimes six big thick beans of green color. The pods are straight, five to six inches long, one and one-half inches wide, fully three-quarters of an inch thick, and grow four to eight in a cluster. The beans are exceptionally tender and have the fine nutty flavor of Fordhook.

Burpee's Best is an extremely vigorous, strong-growing plant and a natural climber. It will climb to a height of ten or fifteen feet, with pods in clusters the entire length of the runners. Easy to pick and to shell—a quick basket filler. Has remarkable long-distance shipping qualities and an attractive appearance, and wins a price preference over all other varieties in the lima bean markets.

You will find in this bean a double advantage. On account of the large size and growth of the plants, less seed is required, and a greater yield is returned. Burpee's Best has proved its capacity to produce as much as **eight tons of green beans per acre.**

Burpee's Best is the best pole lima of the Fordhook type for either the market or the home garden. Pkt. 15¢; ½ lb. 40¢; lb. 60¢; 2 lbs. \$1.00; 5 lbs. \$1.90; 10 lbs. \$3.55, postpaid.

Due to their heavy yield the plants require stout poles or posts as supports. Pkt. 15¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 80¢; 5 lbs. \$1.35; 100 lbs. \$2.50, postpaid.

Burpee's Pole Beans Small Seeded

McCaslan

Pole Beans are extremely productive. They come into bearing later than the Bush varieties, but bear for a longer period, and some produce bigger pods. They are less hardy than Bush Beans and are therefore planted a week later. They mature in from 65 to 75 days. Sow the seed when the weather has warmed up, about the second week of May and not later than June 15. Set poles 4 ft. apart and place 8 to 10 beans around each; 1 pound of seed for 125 poles. When plants are well established, thin to 2 or 3 plants to a pole; or the seed may be planted along a trellis, sowing 300 ft. of row with 1 lb. of seed. Pick the beans before they have reached full size.

The pods are distinctly curved. Pkt. 10¢; ½ lb. 25¢; lb. 35¢; 2 lbs. 55¢; 5 lbs. \$1.15; 10 lbs. \$2.05, postpaid.

Burpee's *Delicious* Beets

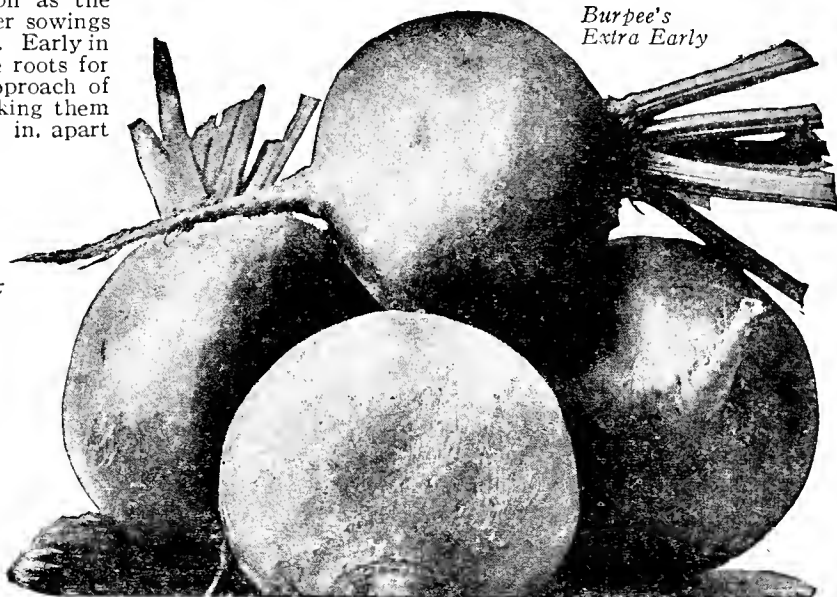

Make repeated sowings throughout the season. Start the first sowing early in the spring as soon as the ground can be worked. Follow this with other sowings made 3 to 4 weeks apart up to the end of July. Early in July make a large sowing to produce full-size roots for winter storing. Gather the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth. Place the rows 12 in. apart and use one oz. of seed for 100 ft. of drill. Thin to stand 3 to 4 in. apart before the plants begin to crowd. 4 to 6 pounds of seed to sow one acre in drills. The early varieties mature in 45 to 50 days; the mid-season and late varieties require 60 to 65 days.

Burpee's *Delicious* Beets

128 Burpee's Improved Blood ⊙

An early variety which matures a few days after Burpee's Extra Early. Producing larger, more globe-shaped roots of sweet flavor. The roots are round but sometimes inclined to be deeper than their diameter. The flesh is a beautiful dark red color which is well retained when the Beets are cooked. Though it is a quicker grower, the roots will keep a long time in storage. A splendid variety for the home garden and for market. We recommend Burpee's Improved Blood as being dependable in every way. Grows 3 to 4 in. in diameter. Pkt. 10¢; oz. 15¢; 4 ozs. 40¢; ½ lb. 60¢; lb. 90¢; 2 lbs. \$1.60; 5 lbs. \$3.80; 10 lbs. \$6.75.

115 Detroit Dark Red ⊙

An early maturing Beet of remarkable uniformity. Splendid for the home garden, for market, for shipping, and for canning. The roots are perfectly round and of a deep red color. They reach 2½ to 3 in. in size and have a small collar and a thin taproot. The flesh is very dark blood-red, showing hardly any zones. It is tender, fine grained, exceptionally sweet. Has medium size, slender, erect foliage; excellent for bunching. Pkt. 10¢; oz. 15¢; 4 ozs. 45¢; ½ lb. 70¢; lb. \$1.15; 2 lbs. \$2.10; 5 lbs. \$5.05; 10 lbs. \$9.20.

116 Ohio Canner

Pkt. 10¢; oz. 15¢; 4 ozs. 45¢; ½ lb. 70¢; lb. \$1.15; 2 lbs. \$2.10; 5 lbs. \$5.05; 10 lbs. \$9.20.

120 Winter Keeper

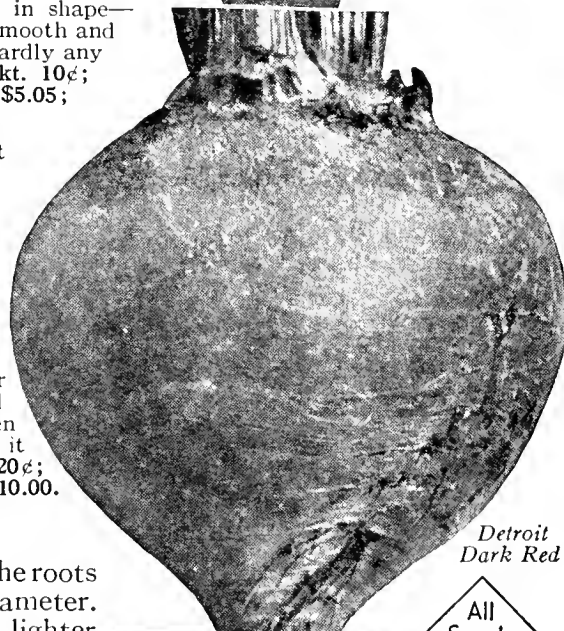

A "Long Season" Beet which remains solid and tender until late fall. Claims are made that it is one of the finest Beets ever grown. As the half-long shape roots grow slowly, it should be used as a Late Beet, and you will find the Winter Keeper firm and sweet when most others are past their prime. Color rich red without zones. What it lacks in appearance is more than made up in quality. Pkt. 10¢; oz. 20¢; 4 ozs. 50¢; ½ lb. 75¢; lb. \$1.25; 2 lbs. \$2.30; 5 lbs. \$5.50; 10 lbs. \$10.00.

Widely grown for an early supply for the table or market. The roots are nearly round, being flattened on top and 3 in. in diameter. The skin is dark red and the flesh is a shade or two lighter with still lighter zones. The tops are medium size for bunching. Of finest quality and a great improvement over the old Egyptian, being sweeter, more tender, smoother and more round in form, and larger, although equally as early. One of the most popular and desirable varieties as it is in presentable market shape quicker than most other sorts. Our strain is very uniform in shape and color. Pkt. 10¢; oz. 15¢; 4 ozs. 40¢; ½ lb. 60¢; lb. \$1.00; 2 lbs. \$1.85; 5 lbs. \$4.40; 10 lbs. \$8.00.

Savoy

Savoy Cabbage

209 Perfection Drumhead

(L) This Savoy Cabbage is the best variety in this class. It enjoys great popularity on account of its tasty flavor, which is sweeter and more delicate than that of ordinary Cabbage. The large round heads are somewhat flattened and very heavy. The deep green, crinkled outer leaves enclose the tender, light green heart. It matures late in the fall and will keep all winter long. Pkt. 10¢; oz. 30¢; 4 ozs. 85¢; ½ lb. \$1.25; lb. \$2.25; 2 lbs. \$4.20; 5 lbs. \$10.10.

Chinese or Celery Cabbage

Chinese Cabbage may be served like Lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary Cabbage. Where summers are cool, it may be sown in spring, but in the vicinity of Philadelphia seeds sown early in August have proved to give the best results. Makes full-size heads in 55 to 70 days after sowing. May be stored for about two months. Ask for free cultural directions.

214 Chihli

A wonderful variety and one that deserves to head our list as it is an early and sure-heading Chinese Cabbage, growing 18 to 20 in. tall and about 3½ to 4 in. thick. The firm, well-blanching heads taper near the top. Pkt. 10¢; oz. 25¢; 4 ozs. 75¢; ½ lb. \$1.15; lb. \$2.00; 2 lbs. \$3.70; 5 lbs. \$9.00.

212 Pe-Tsai

Large, light green outer leaves. The thick, pure white heart is tender, juicy, and has an agreeably pungent flavor. Makes longer heads than Wong Bok described below. Do not sow seed too early if you wish good plants. August first is early enough. Pkt. 10¢; oz. 20¢; 4 ozs. 65¢; ½ lb. \$1.00; lb. \$1.75; 2 lbs. \$3.20; 5 lbs. \$7.70.

211 Wong Bok

The variety most generally planted in all locations. A particularly desirable variety, with short, broad, tightly folded, well-blanching heads. Juicy, and of agreeably pungent flavor. The heads are 8 to 10 in. high and very broad. Pkt. 10¢; oz. 25¢; 4 ozs. 75¢; ½ lb. \$1.15; lb. \$2.00; 2 lbs. \$3.70; 5 lbs. \$9.00.

174 Wisconsin Hollander

(L) This late Cabbage belongs to the "Yellows-resistant" group and has become a foremost variety in sections where this disease prevents growing of non-resistant Cabbage. It has been developed from the famous Danish Ballhead but requires about 10 days longer to come to maturity. The plants are larger than Ballhead, and where conditions are favorable, will produce a heavier yield per acre. When fully mature the heads are sometimes slightly flattened on top. Pkt. 15¢; oz. 45¢; 4 ozs. \$1.35; ½ lb. \$2.45; lb. \$4.50; 2 lbs. \$8.35; 5 lbs. \$20.25.

199 Burpee's Short Stem Drumhead

(L) Of dwarf compact growth with little outer foliage. The leaves curve inward over the flattened heads. It is an excellent variety for fall and winter. It is grown in certain sections to the exclusion of all other varieties for making sauerkraut. Stored during winter, it will keep in perfect condition until early in the spring. Burpee's Tasty Carrots

Sow the seed thinly in shallow drills early in the spring in rows not less than 12 in. apart. Make succession sowings every two weeks up to the early part of July. When well started, thin the small early varieties to stand 2 in. apart in the row and the larger later varieties from 3 to 4 in. A rich, mellow, deeply worked soil gives the finest Carrots. Cultivate throughout the season to insure smooth straight roots. For winter storing, sow a long row about the middle of June which will make full size roots before cold weather sets in. One ounce of carrot seed will sow 250 ft. of drill. 3 lbs. of seed is required to drill one acre. The early varieties mature in 60 to 65 days after sowing. The midseason Carrots require 65 to 75 days and the late varieties 75 to 85 days to come to maturity.

225 Danvers Half-Long

A favorite main-crop or late Carrot of great uniformity. The roots are 6 to 7 in. long and $1\frac{1}{4}$ in. thick, tapering gradually toward the blunt end. Burpee's Golden Self-Blanching

262 Burpee's Golden Self-Blanching ☉

Selected French-Grown Seed: Original Dwarf Strain

(E) There are many growers who insist on having the original French-grown seed of this foremost Celery though it is somewhat more expensive than the American-grown seed. The plants make a compact dwarf growth and form thick, solid, heavily ribbed stalks which blanch easily into a beautiful clear waxen yellow color. The quality of this variety is superb. The stalks and heart are crisp, solid, heavy, free from any strings, and of the most delicious flavor. It is a standard market and shipping variety, growing 14 to 18 in. tall. Imported seed grown specially for us in France. Pkt. 20¢; ½ oz. 60¢; oz. \$1.00; 4 ozs. \$3.00; ½ lb. \$5.50; 1b. \$10.00.

Golden Plume (see next page)

For the earliest crop, start the seed in a hotbed or in the house during February or March. For the fall or main crop, sow the seed in the open ground as early in the spring as the soil can be worked into good condition. They will be ready for setting in rows in July. Celery requires a rich, well-manured soil and plenty of moisture so that it can make a continuous growth. Soil, boards, or paper cylinders may be used to blanch the stalks. One oz. of seed is sufficient for 600 ft. of drill. One oz. sown in the seed-flat gives 8,000 to 10,000 good strong plants; 2 ozs. are needed for planting one acre.

The early (E) varieties of Celery mature in about 120 days from the time the seed is sown. They are adapted for starting indoors, or outdoors when the ground is fit for planting. The late (L) Celeries need 140 days to come to maturity. They are planted extensively for late fall use and winter storing, although many of the early varieties also store quite well.

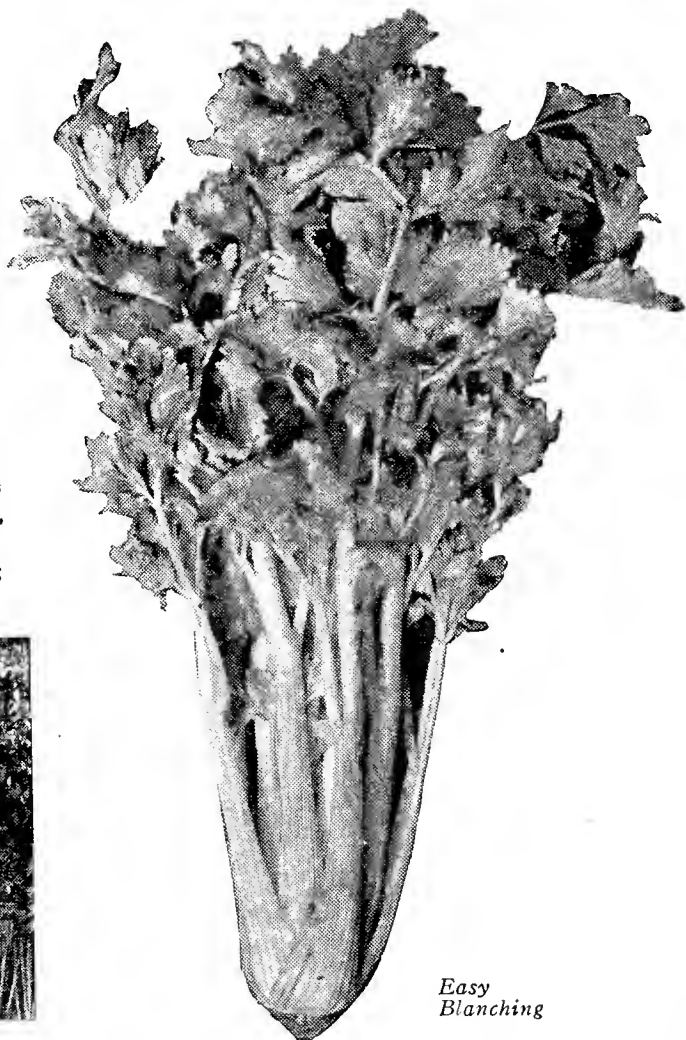

260 Golden Self-Blanching

(E) This is the American-grown seed produced from the dwarf French-grown stock. It exhibits all the excellent qualities of the original and is sown extensively by home gardeners as well as by market growers. The dwarf compact plants are heavy and solid. The heart is large, tender, well blanching, solid, and has a delightful nutty, crisp, and juicy flavor. It will yield a good crop of attractive Celery if grown under average conditions suitable for this crop. Pkt. 10¢; ½ oz. 25¢; oz. 45¢; 4 ozs. \$1.35; ½ lb. \$2.45; 1b. \$4.50.

267 Easy Blanching ☉

Good Keeper; Fine Flavor; Crisp and Brittle

(E) This is a midseason or second-early Celery which will be ready for use soon after Golden Self-Blanching. It resembles Golden Self-Blanching in size and general characteristic of growth, but the foliage is a beautiful bright rich green. The plants make a vigorous, upright yet compact growth, and the stalks are easily blanching to a beautiful pure white color. They are thick, solid, heavy, unusually meaty, pure white, crisp, altogether free from any fiber or strings, and of extra fine flavor. Easy Blanching has desirable blight-resistant qualities and has proved to be harder than Golden Self-Blanching. While it is a midseason Celery, it also stores well throughout the winter. Pkt. 10¢; ½ oz. 25¢; oz. 45¢; 4 ozs. \$1.35; ½ lb. \$2.45; 1b. \$4.50.

Burpee's Finest Celery

272 Burpee's Fordhook

The Most Solid, Crisp, Tender, and Finest Nut-Flavored Celery in Existence

See illustration in color on inside back cover

(L) Burpee's Fordhook Celery is, without question, the finest fall and winter variety in existence. The plants are stocky and compact, averaging 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a small tender heart in the center. They are extremely thick, measuring over $\frac{1}{2}$ in. in diameter. Always they are tender, crisp, without strings, and juicy. Fordhook Celery will keep in perfect condition throughout the winter. Pkt. 25¢; $\frac{1}{2}$ oz. 45¢; oz. 75¢; 4 ozs. \$2.25; $\frac{1}{2}$ lb. \$4.10; lb. \$7.50.

275 Winter Queen (L) One of the finest dwarf winter Celeries we have ever grown. It resembles Golden Self-

Blanching in height and habit, but the leaves are a rich green color and in this respect are not unlike those of Giant Pascal. As it blanches quickly it is ready for home or market much earlier in the fall. The plants make large bunches of extra-heavy stalks with very large, tightly folded hearts. Pkt. 5¢; $\frac{1}{2}$ oz. 20¢; oz. 30¢; 4 ozs. 85¢; $\frac{1}{2}$ lb. \$1.25; lb. \$2.25.

266 White Plume (E) The earliest and the most easily blanched of all Celery varieties, at its best right after digging but does not keep well. The foliage is an attractive light green tinted with white. When blanched, the stalks are pure snowy white. They are tender and crisp, without any fiber or strings. Their flavor is rich and nutty. Highly recommended to home gardeners, and of decided value to market growers who are interested in benefiting from the early high market prices. Pkt. 10¢; $\frac{1}{2}$ oz. 20¢; oz. 30¢; 4 ozs. 85¢; $\frac{1}{2}$ lb. \$1.25; lb. \$2.25.

268 Golden Plume (E) (see illustration, Page 98) This is also called Wonderful, a name that is most appropriate for this splendid early variety. Some gardeners consider it the best early Celery in existence. It is quite resistant to blight and rot and possesses very good storing qualities. The plants are of medium size, stocky, compact, and have a thick, full, creamy heart. The stalks blanch readily and are of excellent table quality. It resembles Golden Self-Blanching but is earlier, larger, and of more vigorous growth. A fine variety for the home and market garden. Pkt. 15¢; $\frac{1}{2}$ oz. 30¢; oz. 55¢; 4 ozs. \$1.65; $\frac{1}{2}$ lb. \$3.00; lb. \$5.50.

282 Giant Pascal

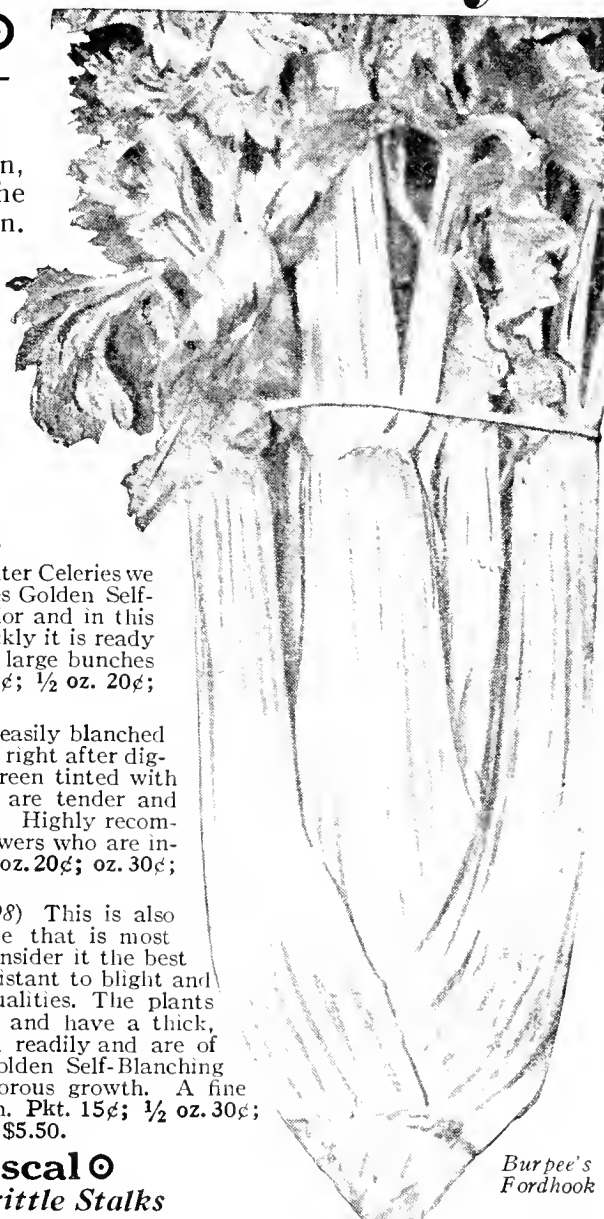

Large, Thick, and Brittle Stalks

(L) Immense, light yellow stalks which will keep in perfect condition throughout the winter. Considered by many the standard winter Celery. The plants are productive, with tall, upright leaves of a rich dark green color. The stalks are tall and thick. They are broad, distinctly ribbed, tender, crisp, and very tasty. After blanching they are an attractive light yellow. Inasmuch as the stalks are green, soil should be used for blanching. It will keep in perfect condition throughout the winter months. Pkt. 10¢; $\frac{1}{2}$ oz. 20¢; oz. 30¢; 4 ozs. 85¢; $\frac{1}{2}$ lb. \$1.25; lb. \$2.25.

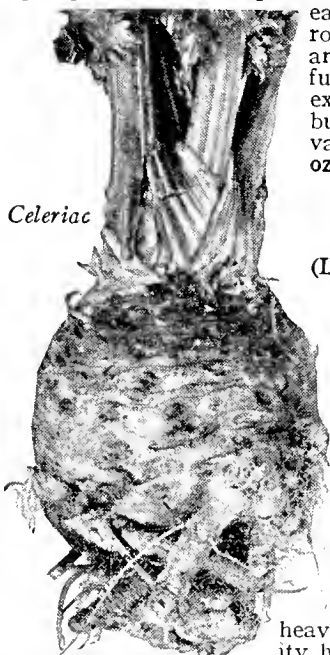

Celeriac or Turnip-Rooted Celery

293 Giant Prague

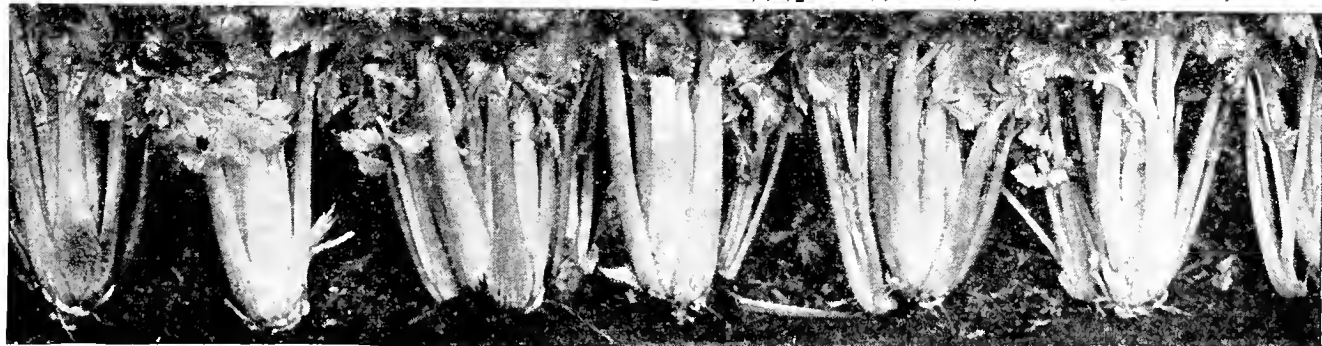

Gradually more and more gardeners are becoming acquainted with this splendid vegetable, which is much easier to grow than Blanching Celery. The edible portion is the large thick root, which is highly valued boiled, or is used in vegetable soup, stews, and other dishes. Celeriac grows best in a moderately moist yet well-drained soil which is fairly rich in barnyard manure. Frequent cultivation and occasional thorough watering are necessary. When planted on too heavy as well as freshly and excessively manured soil, the tubers will grow to enormous size; the quality, however, will be rather inferior as the tubers will become stringy. Start the seed in boxes indoors, and when the seedlings are large enough to be handled, transplant into the garden to stand about 8 to 10 in. apart each way. Use when the roots are of moderate size. Does not require blanching. Pkt. 10¢; $\frac{1}{2}$ oz. 20¢; oz. 30¢; 4 ozs. 85¢; $\frac{1}{2}$ lb. \$1.25; lb. \$2.25.

Burpee's Cauliflower

Burpeeana

253 Burpeeana ⊙

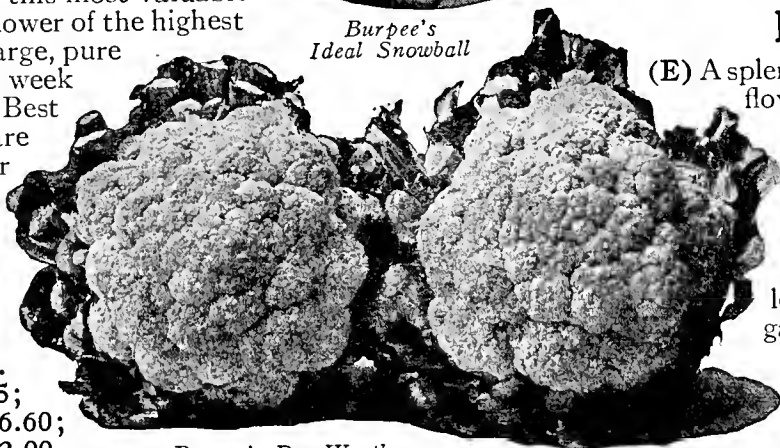

(E) This is Super Snowball as offered by Burpee. It stands out as the most valuable Cauliflower. In tests of the Pennsylvania State College it appeared as the best of all strains, maturing not quite so early as Burpee's Fordhook. It is early, with the heads forming all at one time, showing a uniformity of size, shape, and type that is truly astonishing. Beautiful, round, pure white heads with smooth curds. Pkt. 25¢; 1/4 oz. \$1.00; 1/2 oz. \$1.75; oz. \$3.00; 4 ozs. \$9.00; 1/2 lb. \$16.50; lb. \$30.00.

249 Extra-Early Dwarf Erfurt

(E) Of dwarf compact growth with large heads of uniform size, having a closely formed, very smooth, pure white curd. Pkt. 10¢; 1/4 oz. 65¢; 1/2 oz. \$1.15; oz. \$2.00; 4 ozs. \$6.00; 1/2 lb. \$11.00; lb. \$20.00.

245 Burpee's Dry Weather ⊙

(E) Though Cauliflower does best in a cool and moist season, in "Dry Weather" we have a variety which is actually drought resistant and will produce heads when all other varieties are a complete failure due to lack of moisture. In addition to this most valuable feature, it is a Cauliflower of the highest quality, producing large, pure white heads only a week later than Burpee's Best Early. The heads are considerably larger than those of that famous variety, and are surrounded by more foliage. Individual heads weigh 2 lbs. each. Pkt. 15¢; 1/4 oz. 75¢; 1/2 oz. \$1.25; oz. \$2.20; 4 ozs. \$6.60; 1/2 lb. \$12.10; lb. \$22.00.

Burpee's Dry Weather

Burpee's Ideal Snowball

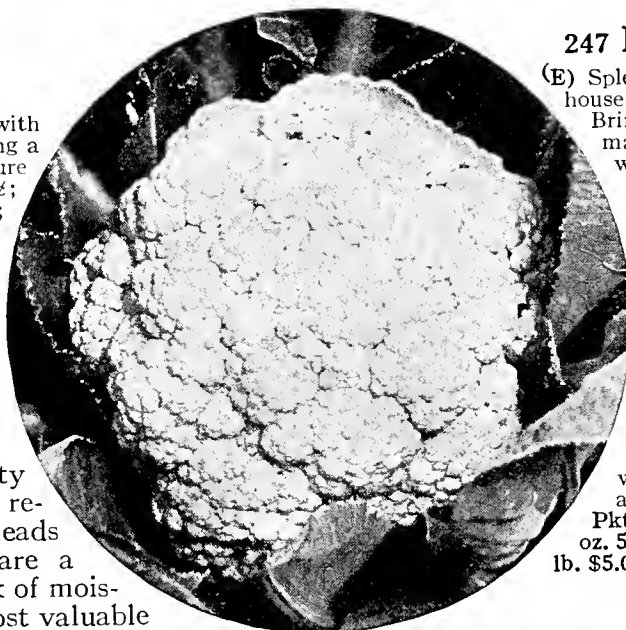

Cauliflower is one of our choicest vegetables. For an early crop, start the seed indoors during March and set into the open by the end of April. For a main or fall crop, sow the seed during June and plant out the latter part of July. It takes about 30 to 40 days for the plants to grow large enough for setting into the field. One oz. will give 1000 to 1500 strong plants; 1/4 lb. is required for one acre, placing the rows 3 ft. apart and the plants 2 ft. apart in the rows. Early (E) varieties require from 90 to 100 days to mature. Late (L) varieties require over 100 days.

246 Burpee's Fordhook ⊙

(E) The earliest of all varieties we have ever grown. The fact that we named this Fordhook is ample proof of our high esteem for this variety. It will head up well even under unfavorable conditions when most other varieties fail to give a satisfactory crop of good-sized, marketable heads. The plants are dwarf and compact, yet the heads measure fully 6 in. in diameter. They are well rounded and have a fine, closely formed curd of a pure white color. After another season of watching this variety in our trial grounds and comparing it with other varieties we are even more enthusiastic about its qualities, and we wish that every grower of Cauliflower could give it a trial this year. Pkt. 15¢; 1/4 oz. 75¢; 1/2 oz. \$1.35; oz. \$2.40; 4 ozs. \$7.20; 1/2 lb. \$13.20; lb. \$24.00.

255 Burpee's Ideal Snowball ⊙

(E) We claim this new Cauliflower is well named as it is Ideal in every way. Perhaps its outstanding merit is the large leaves which completely enfold the head and keep it pure white at all times. About 5 days later than Early Snowball. Plants dwarf and compact, and the heads are large, solid and snow white. Pkt. 20¢; 1/4 oz. 85¢; 1/2 oz. \$1.45; oz. \$2.50; 4 ozs. \$7.50; 1/2 lb. \$13.75; lb. \$25.00.

247 Early Snowball

(E) Splendid for forcing in the greenhouse and frames or outdoor culture. Brings a good price in the early market and stands shipping very well. The plants are dwarf. Head about 6 in. in diameter and a smooth, compact curd. The heads weigh about 2 lbs. Pkt. 10¢; 1/4 oz. 75¢; 1/2 oz. \$1.25; oz. \$2.20; 4 ozs. \$6.60; 1/2 lb. \$12.10; lb. \$22.00.

258 Veitch's Autumn Giant

(L) The finest of the late Cauliflowers. Compact white heads; does well in sections where season is long and favorable for growing Cauliflower. Pkt. 10¢; 1/4 oz. 25¢; 1/2 oz. 35¢; oz. 50¢; 4 ozs. \$1.50; 1/2 lb. \$2.75; lb. \$5.00.

244 Burpee's Best Early

(E) A splendid extra-early Cauliflower, unexcelled for certainty of heading. Of strong growth, with erect, pointed, dark green leaves growing closely about the heads. It is an excellent market and home-garden variety. Pkt. 15¢; 1/4 oz. 75¢; 1/2 oz. \$1.35; oz. \$2.40; 4 ozs. \$7.20; 1/2 lb. \$13.20; lb. \$24.00.

Burpee's Sweet Corn

Sweet Corn is one of the most satisfactory vegetables for the home garden and one of the most profitable for the market gardener. Plant the seed, after all danger of frost has passed, in rows 2 to 4 ft. apart, and space the seed 3 to 4 in. apart in the row, or plant in hills 3 to 4 ft. apart. Cover with 1 to 2 in. of fine soil. For a continuous supply, sow varieties which will mature in succession and also make succession sowings every 10 to 14 days up to July 1. One lb. of seed spaced by hand will give 500 ft. of row; 10 lbs. are needed to plant one acre. The extra-early (EE) varieties of Sweet Corn mature in 65 to 75 days. The early (E) varieties mature in 76 to 85 days. The midseason (M) varieties require 86 to 95 days and the late (L) varieties 96 to 110 days; the very late (VL) varieties 120 days and more.

Burpee's Lettuce

Loosehead or Cutting These do not form solidly folded heads, but where the plants are grown singly at a suitable distance apart, they make a large, round, thick bunch of leaves which are blanched to a light green or creamy yellow in the center of the plant. Cos or Romaine Lettuce

Cos Lettuce or Salad Romaine is much esteemed for its fresh crispness and mild flavor. It is widely grown in the northern states during spring and early summer and to provide a crop of tightly folded, elongated heads for fall use. Dwarf White Heart is the earliest variety we know of, and since it is self-closing, does not require tying up. Other Cos forms loose heads which must be tied together with strings in order to blanch them properly and make them tender.

537 Dwarf White Heart Coso (Light Green) We believe this is the most satisfactory of the Cos Lettuce varieties. It is crisp, has a refreshing, snappy flavor, and does not need tying up in order to blanch the heart. Compact, strictly erect plants, 10 in. tall, containing a surprising quantity of brittle juicy leaves of light green color and of a most appetizing piquant flavor. It is highly recommended for the home garden and high-class markets. Pkt. 10¢; oz. 20¢; 4 ozs. 50¢; ½ lb. 75¢; lb. \$1.25; 2 lbs. \$2.30; 5 lbs. \$5.50.

540 Dark Green Cos A medium sized, dark green variety which forms a firm, well-folded head, which is well-blanching, loaf shaped and of tender and luscious quality. Leaves slightly crumpled. When fully blanched, the heads, which are 7 to 8 in. in height, are white with only the faintest tinge of green, and the mid-ribs are white at heart. Rapidly becoming a favorite with market growers everywhere. Pkt. 10¢; oz. 20¢; 4 ozs. 60¢; ½ lb. 85¢; lb. \$1.50; 2 lbs. \$2.75; 5 lbs. \$6.60.

Burpee's Watermelons

Rich, rather sandy soils produce the finest crops of Watermelons, but a well-drained loam, especially with a southern exposure, is also suitable. Two shovelfuls of well-decomposed manure should be mixed with the soil under each hill. Watermelons should not be planted until the weather is quite warm. The plants grow vigorously, and for this reason the hills should be about 6 to 8 feet apart. Place 6 to 8 seeds in a circle in each hill, and cover $\frac{1}{2}$ inch deep with fine soil. One ounce will plant 20 to 25 hills; 4 to 5 pounds per acre. The early (E) Watermelons mature in 70 to 80 days. The midseason (M) varieties require about 85 days. Late (L) varieties need 90 days or more.

Onions are highly praised for their tonic qualities and their use is advocated by physicians everywhere. The soil best suited to grow a good crop of Onions is one that is reasonably fertile, well drained, and well prepared. Cover the seed lightly and when the seedlings are 3 to 4 in. tall, thin them to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the Onions are harvested. One oz. of seed will give 200 ft. of drill; 4 to 5 lbs. are required for one acre. Onions require from 100 to 120 days to come to maturity.

Extra-Early Peas

Grow**

Every home garden can easily produce enough Peas to supply the table for many weeks. For a continuous supply of this delicious vegetable, sow the hardier smooth-seeded peas as early in the spring as the ground can be prepared. Follow them with the wrinkled-seeded sorts when all danger of frost has passed. Besides sowing at the beginning of the season varieties which will mature one after another, also make succession sowings at intervals of 10 to 14 days up to about June 1. Peas prefer cool, moist, loamy soil. Cover the seed 1 to 2 inches deep. Provide supports for the tall-growing varieties. One lb. of seed will sow 120 ft. of single row. In drills, 100 to 150 lbs. are required to plant one acre. The extra-early (EE) peas mature in 50 to 55 days; the early (E) varieties require 55 to 60 days; the second-early or main crop (M) varieties need 65 to 75 days until their main picking.

Burpee's Choice Radishes

If your garden includes some of each of the three different classes of Radishes—Spring, Summer, and Winter Radishes—it will easily keep you supplied with this refreshing vegetable practically all year around. All classes are easy to grow. Plant as early in the spring as the ground can be worked, and make succession plantings every 10 days. Where the summers are hot, sow until the middle of May, then stop, but make three more sowings during August. Sow the seed thinly in shallow drills and cover with about one-quarter inch of fine soil. The quality of Radishes depends considerably upon thorough soil preparation, good fertility, and ample moisture. One ounce is sufficient for 100 feet of drill; 8 to 10 pounds of seed are needed to sow one acre planted in drills.

1097 Burpee's Sunnybrook Earliana ⊙

(E) An extra-early red Tomato with fine, smooth, scarlet-red skin. Our special Sunnybrook strain matures about five days earlier than other Earliana strains. The compact vines carry an enormous crop of beautiful scarlet-red fruits. The entire crop can be gathered usually in about three weeks from the time the first fruit ripens. It is a most productive variety, splendid for market and for the home garden. The fruits are very solid. They are produced mostly in the center of the plant. Fleshy, juicy, and of excellent flavor. Pkt. 10¢; ½ oz. 30¢; oz. 50¢; 4 ozs. \$1.50; ½ lb. \$2.75; lb. \$5.00; 2 lbs. \$9.30; 5 lbs. \$22.50.

1100 Spark's Earliana

(E) This is the original Earliana Tomato which has long been a great favorite with growers who choose the original Spark's Earliana on account of earliness, productiveness, good shape, and rich scarlet-red color. Often forced in the greenhouse during the winter months. Pkt. 10¢; ½ oz. 20¢; oz. 35¢; 4 ozs. \$1.00; ½ lb. \$1.65; lb. \$3.00; 2 lbs. \$5.60; 5 lbs. \$13.50.

1101 Chalk's Early Jewel

Tomatoes are rich in health-giving elements, and are universally used as appetizing food. All gardeners should grow an early crop as well as a main crop, whether they are for home use or market. The main crop is, of course, the most desirable for canning.

The early varieties (E) mature in 85 to 95 days, the mid-season or second-early varieties (M) in 96 to 105 days, the late or main-crop varieties (L) in 110 to 120 days.

(Winner All America Award of Merit)

A Sensational All-Purpose, Globe-shaped Tomato

See Illustration in Color on Back Cover

(M) We have great pleasure in introducing to our friends this season a decidedly new and distinct Tomato of superior merit. The strong, healthy vines produce an enormous crop of uniform, medium to large size, rich pinkish-red Tomatoes. The globe-shaped fruits grow in clusters of 6 to 10, very solid, meaty, and free from any core. This Tomato contains little or no acid and can be classed as a sweet, pinkish-red Marglobe. It abounds in vitamins A, B and C. It is a shy seeder, the seed cavities being full of solid meat, and matures in about 100 days. The skin is very firm, making it a good shipper. Excellent for both home and market garden. Burpee's Globe also has proved to be a fine Tomato for forcing in the greenhouse, and for this purpose the vines should be trimmed to allow the plants to grow tall.

The Tomatoes are perfectly smooth and very solid. They are of handy size, with an even-colored, glossy, bright pinkish red skin. The flesh is juicy and of delightful sub-acid flavor. Burpee's Table Turnips

Purple-Top
White Globe

Turnips develop best during cool weather. In the vicinity of Philadelphia a fine summer crop can be grown from seed sown early in the spring. Most Turnips, however, are sown for a fall crop any time from the middle of July until about August 20. Sow thinly in rows not less than 18 in. apart and cover with $\frac{1}{2}$ in. of fine soil. Turnip seed often is broadcasted between the rows of corn or in the cultivated orchard. Early varieties are sown as a catch crop after early Potatoes. One oz. will sow 400 ft. of drill. $1\frac{1}{2}$ to 2 lbs. of seed are needed per acre. For broadcasting, 4 to 5 lbs. are needed for the same area. The early (E) varieties require 45 to 55 days and the late (L) varieties 60 to 75 days to reach maturity.

1163 Purple-Top White Globe

Burpee's Famous Seed Farms

Flower Seed Trials at Fordhook

Fordhook Farms and Experimental Gardens

It is the considered opinion of more than a million garden lovers in America that **Burpee's Seeds Are the Best Seeds That Grow.** We know that the fundamental reason for this good opinion and good will, so vital to the success of our business, is the fact that W. Atlee Burpee Co. has established and keeps in full operation two of the largest and most scientifically organized Experimental Seed Farms to be found anywhere in the world today.

The tangible results of the long series of experiments in cross-breeding and hybridizing undertaken both at Fordhook and Floradale, are seen in the new and improved varieties of flowers and vegetables with which year by year Burpee's have enriched the gardens of America.

Fordhook Farms, nearly 800 acres in extent—and where the Burpee homestead is located—was the scene of the first experiments in plant breeding initiated by W. Atlee Burpee, whose persistent and painstaking efforts to evolve a race of glorified Sweet Peas were crowned with such phenomenal success that the name of Burpee has become inseparably linked with Sweet Peas. The wonderful varieties he successively introduced are now world-famous.

Developing New Flowers and Vegetables

We are proud to record that during the decade just past we have placed in the gardens of America more really valuable flowers and vegetables than any other seed house. Notable among the Burpee introductions are the sensational new Ruffled Sweet Peas, Golden Cosmos, improved Marigolds, Petunias and Zinnias, and a number of improved table vegetables which have greatly enriched the diet of the people of today.

One of our recent achievements is the startling transformation of the humble single Nasturtiums into the glorious race of double Nasturtiums we offer in this catalog for 1936.

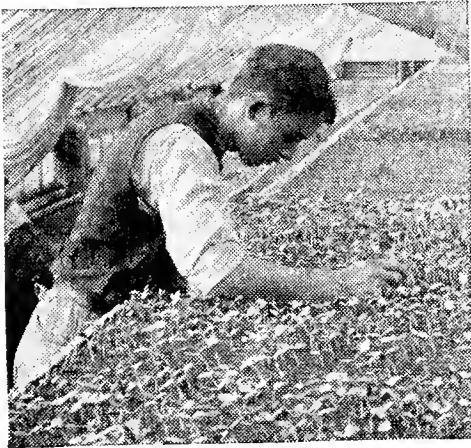

To bring to their present state of perfection Burpee's Double Hybrid Nasturtiums, 40,000 hand crosses were made, and experiments are still proceeding on our Seed Farms.

Our staff of expert plant breeders are continuously working with all flowers and vegetables in order to obtain new and improved varieties.

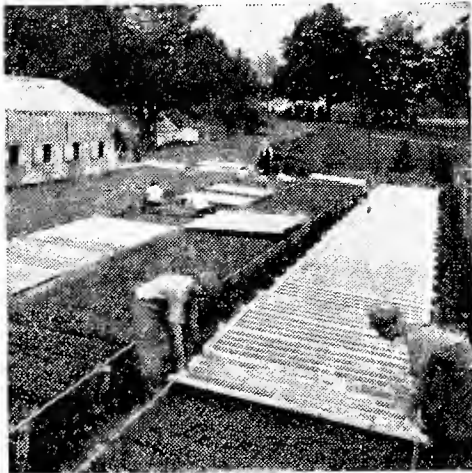

Our Fordhook Farms are also utilized largely for growing, testing and insuring the trueness-to-type of all the seeds we send out, so that they may have the backing of the Burpee Guarantee, printed on page 1.

More than 22,000 of these tests are made annually as each strain is carefully compared with all similar strains in cultivation and the results carefully recorded in our Trial Books. This is really the most exacting part of our business as seed growers, but it has helped to make the reputation of Burpee's Seeds—the best seeds that grow.

You are cordially invited to visit Fordhook Farms and see the beautiful Burpee Gardens during the growing season any time from spring to fall. They are at Doylestown and adjoin highway route 611 leading north from Philadelphia. There are at all times some very interesting things to see.

Floradale Farms

at Lompoc, Santa Barbara County, Calif.

Our Floradale Seed Farms are known as "**The California Home of Flowers**," so widespread has their fame become, and thousands of flower lovers from all parts of the world visit Floradale in May and June every year to enjoy the pleasure of viewing acres upon acres of thousands of varieties of flowers, spread out in a glorious panorama as far as the eye can reach.

The spectacle presented to view should not be missed by garden lovers, for here also are new flowers that cannot be seen elsewhere. Besides Sweet Peas, there are wide expanses of the new big Zinnias, as well as the small Lilliputs, the tiny Cupids, and the shaggy Fantasy sorts. Also the wonderful new Burpee Petunias, Snapdragons, Asters, Cosmos, Marigolds, and many other flowers.

Floradale Farms comprise hundreds of acres in the fertile Lompoc Valley, which is surrounded by mountains opening out to the sea, fifty miles north of Santa Barbara. Here the rich deep soil, the equable climate, and the copious dews combine to impart to the seeds grown here exceptional vitality and vigor.

Experimental work as well as seed-growing is continually going forward at Floradale; in fact, many of our finest new varieties are bred there.

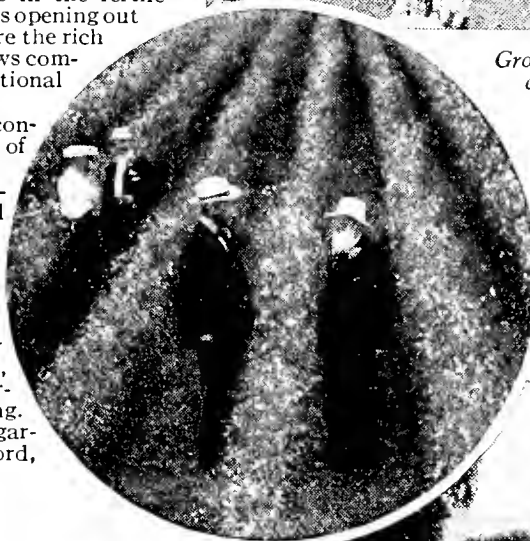

Stocks of standard varieties are also being continually improved by selecting the best individual plants for seed. All the Burpee varieties are kept true-to-type by this method.

If any of our friends should visit California, they are assured of a cordial welcome by our manager and his associates.

Lack of space prevents description of our other seed-growing establishments at Twin Falls, Idaho, and Lansing, Michigan, which are used more particularly for large scale vegetable seed-growing. Experimental work with vegetables for market gardeners is also carried on at our branch at Sanford, Florida.

In the circle is pictured W. Atlee Burpee, whose Sweet Pea creations caused such a furore in America, and Henry Eckford of England, who perfected another type of flower in his country.

On the right, gathering seeds from specially marked plants to sow for our seed stocks.

To the left we picture "caged" plants, which are plants showing signs of a "break"

from which a new variety might be evolved by cross breeding or hybridization. They are carefully covered to prevent pollenization by insects carrying pollen from some undesired plant.

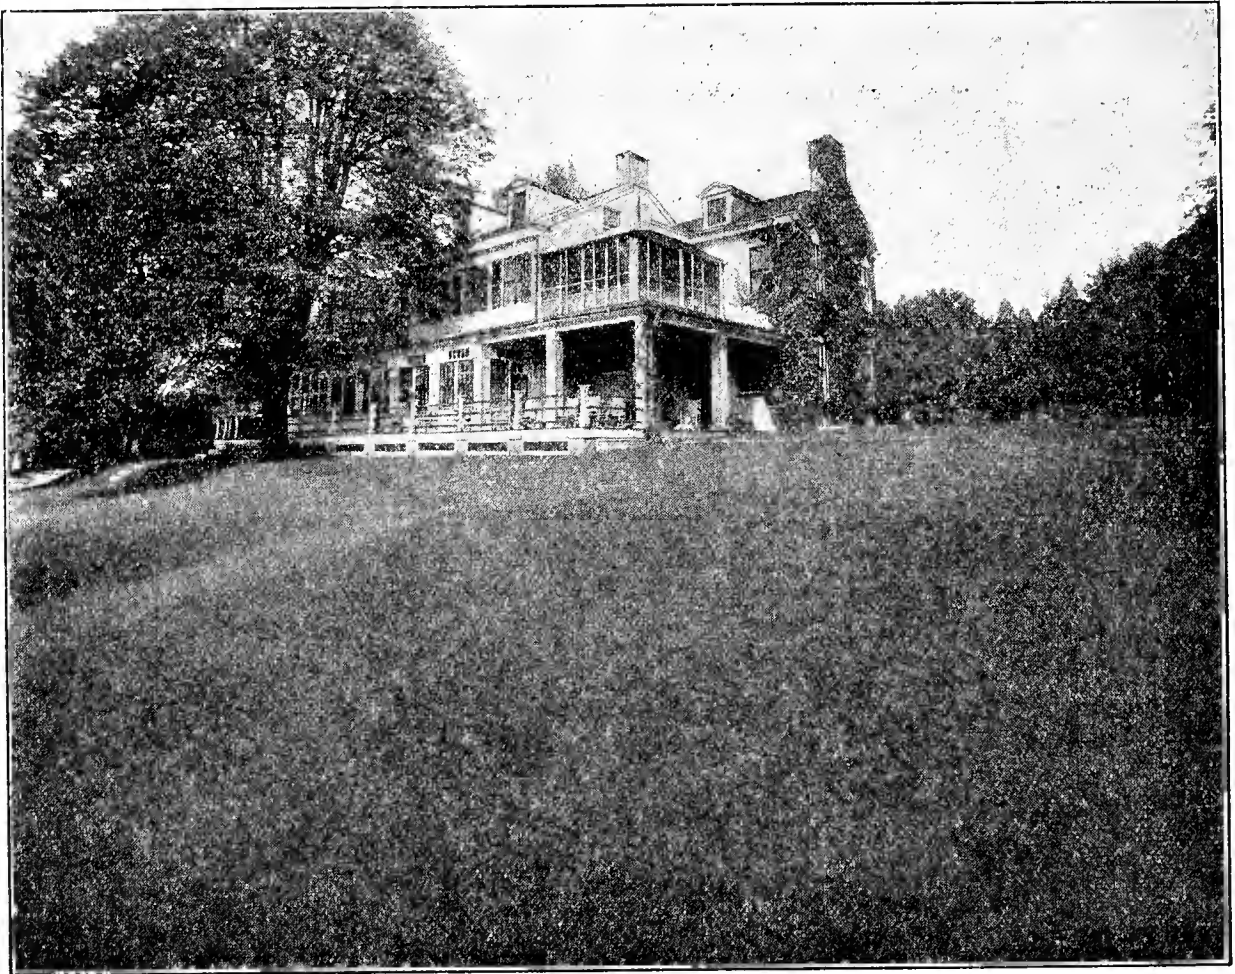

On the right we show our plant breeders inspecting crops of Sweet Peas at Floradale Farms. More than 200 acres are used for growing Sweet Peas every year at our Floradale Farms.

THE LAWN

The best time to start your lawn, or to repair it, is during the cool weather of early spring, for that is when grass grows most successfully and gets its strength to withstand the hot, dry weather that comes later. Why not plan now to have the luxurious lawn that will add so much to the beauty of your home? All you need is a rake, a roller, perhaps some top soil, and good seed. Wherever your lawn looks bare or ragged, loosen the soil with a steel rake. Fill in holes with garden soil, rake smooth. Then reseed, rake the seed in very lightly, and roll. Water with a fine spray. You will be wonderfully repaid for very little labor and expense.

3224 Burpee's New Cupid Zinnias

Lovely little Cupids; the most graceful of all Zinnias

We offer the Cupids this year for the first time—mixed colors only. On our Fordhook Seed Farms last summer visitors were fascinated by these charming little flowers, growing upright on foot-high bushes. They are as easy to grow as any Zinnias and keep on blooming all summer long. The pure white and richly colored yellow and red flowers measure less than an inch across. They are excellent for cutting and house use, and very attractive growing in the garden. Burpee's Cupid Zinnias are one of the outstanding new flowers of the year. They are offered on this page only. Pkt. 25¢; 2 pkts. 45¢; 1/8 oz. \$1.00.
